

Annual Tax Update — Cheat Sheet

Updating the yearly tax numbers: brackets, standard deduction, Medicare/IRMAA, ACA.
Usually done once each fall, when the IRS & Medicare release new figures.

STEP 1 · Update the website (reaches ALL customers automatically)

This is the file **rbp-tax-config.js**. Updating it instantly updates the calculators and tables on your website for everyone — no one has to reconnect anything.

- 1 Go to **github.com/GenaBReal/RetireBlueprintPro** and sign in.
- 2 Click the file **rbp-tax-config.js**, then click the **pencil icon** (— Edit).
- 3 Change only the numbers in the block marked **“EDIT THESE NUMBERS.”** Everything is labeled in plain words. **Leave the “DO NOT EDIT BELOW” part alone.**
- 4 Click the green **“Commit changes”** button (that just means “save”).
- 5 Wait ~1 minute, then open your Tax Engine & Medicare pages to confirm they look right.

STEP 2 · Update your blank master template's Tax Engine tab (reaches NEW customers)

Open your **blank master template** (the one new buyers copy — not a customer's copy), go to the **Tax Engine tab**, and update these exact cells. Google Sheets saves automatically.

Section on the tab	Update each year	Cells
I. Tax Brackets (MFJ)	the Threshold column	C8 : C14
IV. IRMAA Brackets	all 4 columns (MAGI + both surcharges)	F8 : I13
V. Capital Gains (MFJ)	the Threshold column	L8 : L10

The % **rate** columns (D and M) only change if tax *law* changes — rare. Standard deduction fills in automatically from filing status (no cell to edit). **Leave alone:** the Gross-Up Solver (II), the RMD table (III), and the RMD-age formulas in F32/F33.

Who gets the update — at a glance

	Website tools & tables (Step 1)	Sheet projection engine (Step 2)
Existing customers	✓ Yes, automatically (next time they open a page)	✗ No — their copy keeps the year they bought it
New customers	✓ Yes, automatically	✓ Yes — they copy the updated template
Do they reconnect?	Never. No reconnecting is ever needed.	Never.

Good to know

- **Nothing is ever lost.** GitHub keeps every old version — you can always roll back.
- **Safety net.** If the config file ever fails to load, pages fall back to correct figures instead of breaking.
- **Don't rename** rbp-tax-config.js, and keep it in the main folder (with your images).
- **Capital gains** lives only on the sheet (Step 2), not on the website — so it's a sheet-only yearly edit.
